a.1. Crie um repositório público no GitHub, com o nome dos integrantes do grupo, e crie um README.md no repositório criado com a Branch main.

a.2. Usando o Git CMD ou BASH, clone o repositório na pasta de trabalho (pasta onde você quer que o projeto seja criado) e execute o comando git flow init.

a.3. Inicialize o GIT FLOW projeto (tire print da tela que mostra a execução do comando e cole no documento de resposta da sua prova);

OBS: todos arquivos que você criar na pasta clonada do HUB. Use feature, do FLOW.

B. Diagrama de arquitetura de sistema (peso 4, sendo 1 ponto para cada item do documento de resposta da sua prova), representando:

b.1. Camadas de serviços da solução e forma de acesso aos serviços pelo usuário;

b.2. Componentes de aplicação;

b.3. Componentes de dados;

b.4. Conexões entre os itens/componentes da arquitetura.

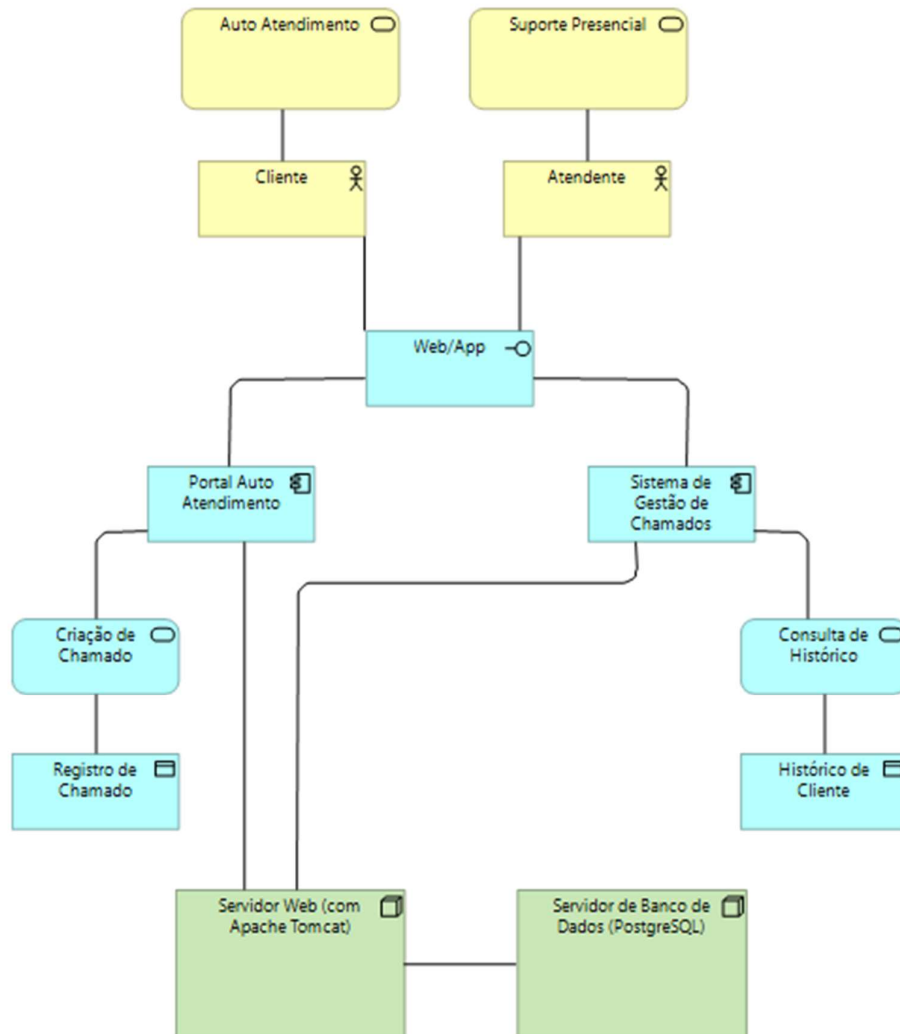

OBS: desenhe somente a arquitetura da parte principal da sua solução. Ignore cadastros básicos de dados (CRUD). Não é necessário montar a visão de arquitetura, arquitetura de negócio e tecnologia. Esse ARCHI precisa ser criado na pasta do seu PC que é clone do HUB.
